

# FastOut™ CS Foam

## READY-TO-USE INSECTICIDE

### TECH NOTES

#### Why FastOut CS Foam?

FastOut CS Foam brings all the advantages of SmartCap™ Technology in a convenient can to reach tough voids. As the foam is applied, it expands, spreading microcapsules throughout the void, coating insects and all internal void surfaces for complete coverage and long-lasting control. Equipped with an extremely versatile label, this product fills a niche that others don't address. Whether it's a wood destroying insect job or general pest, commercial kitchen or private residence, this ready-to-use product is good to have at your side.

#### Directions for Use

##### 1) Shake Well

Shake container for several seconds before each use. This helps to activate the foaming agents for optimal foam consistency and smooth delivery.

##### 2) Drill Hole

It may be necessary to create access into a void for treatment. Drill a hole using a 1/8" drill bit for best fit with the injector tip.

##### 3) Apply Treatment

Insert the injector tip tightly into access hole of void and depress actuator. FastOut CS Foam delivers foam at a rate of approximately 1 quart (fully expanded) per 10 seconds.

##### 4) Wait 8 Seconds

After applying the appropriate amount of FastOut CS Foam, release the actuator but continue to hold the injector tip tightly in the access hole. Wait at least 8 seconds while the product within the injector tube fully expands and dispenses into the treatment area.

## BENEFITS

#### SmartCap Technology Advantages

- Creates a non-repellent effect
- Extends residual activity even in harsh environments
- Remains available to insects even on damp or porous surfaces

#### Ready-to-Use Foam Advantages

- Delivers active ingredient deep into tough to reach voids
- Coats internal surfaces of voids with microcapsules
- Immobilizes insects, suppressing swarm symptoms or insect escape during treatment

#### Specifications

##### Active Ingredient:

0.10% Cyfluthrin

##### Signal Word:

CAUTION

##### Foam Expansion Ratio:

30:1

##### Packaging:

20 oz can; 6 cans/case

##### EPA Registration Number:

499-523

##### Injector Tube:

9" long; fits holes 1/8"-3/8" in diameter

800-777-8570

## FastOut CS Foam in Action

### Use FastOut CS Foam for Wood Destroying Insects

Including: subterranean termites, drywood termites, carpenter bees, carpenter ants, powder post beetles, old house borer and wharf borer.

Specialized treatment for subterranean termites.

Treat galleries for carpenter bees.

Direct wood injection for pests such as drywood termites, subterranean termites or wood destroying beetles.

Inject voids containing carpenter ants or other void dwelling ants.

### Use FastOut CS Foam for General Insect Pests

Including: ants, Asian lady bugs, bed bugs, bees, boxelder bugs, carpet beetles, centipedes, cockroaches, crickets, earwigs, firebrats, flies, flour beetles, fruit flies, fungus gnat larvae, hornets, Indian meal moths, Mediterranean flour moths, millipedes, scorpions, silverfish, sowbugs, spiders (also brown recluse), thrips, ticks, wasps and yellowjackets.

Treat deep into voids where bee or wasp colonies exist.

Treat railroad ties, stumps, fence posts and other rotting timbers for carpenter ants.

Treat voids harboring overwintering pests such as lady beetles, cluster flies, boxelder bugs, etc.

Treat in damp voids harboring German cockroaches.
