TERMITE MONITORING SYSTEM

Get the peace of mind of 24/7
monitoring for termites.

Reveal™

TERMITE MONITORING SYSTEM

**The easy, cost-efficient,
and effective way to uncover
the presence of termites.**

Now we are offering an early alert system for termites around your home – with the new Reveal™ Termite Monitoring System (TMS). The low-profile stations, strategically located around the perimeter of your home, make it easy for your pest management professional to quickly detect the presence of termites during periodic visits.

- Premium monitor design is engineered to detect the presence of termites around your home before they strike.
- If termites are found during a routine inspection, a protection level of service can be upgraded at that time.
- Aesthetically designed, low-profile station housing is unobtrusive and virtually “under cover”.
