

WHITMIRE MICRO-GEN
Prescription Treatment brand
T e c h N o t e s

Active Ingredient:	5.4 percent borax
Packaging:	30 gram reservoir 4 reservoirs per box 5 boxes per case 5 plungers per case

The attractiveness of a liquid

It's well-known that ants are extremely attracted to sugary liquids. Prescription Treatment® brand 388B Advance® ant gel bait has a patented thickener that keeps sweet liquid attractants accessible for their consumption and to take back to the colony to recruit other workers. Once the workers have reached the colony, they feed other workers, reproductives, larvae and queen(s).

The convenience of a gel

PT® brand 388B Advance ant gel bait attracts like a liquid, but because of its patented thickener it also has the characteristics of a gel matrix. Since ants forage vertically as well as horizontally, placing a bait other than a gel within their path can be difficult. PT brand 388B Advance ant gel bait stays where it is applied. No stations, pouring devices or level application surfaces are needed, making it convenient to use.

Keep it simple

Ants are constantly searching for liquids and sugars. PT brand 388B Advance ant gel bait delivers the liquids and sugars in an innovative matrix that gives them what they want. Designed to work with standard bait guns or the new PT brand 345 applicator, PT brand 388B Advance ant gel bait is easy to apply and control. PT brand 388B Advance is simply a superior ant gel bait product.

Ant management system

PT brand 388B ant gel bait is part of an overall Prescription Treatment ant management program that includes: PT brand Advance 375A select granular ant bait; PT brand Advance Dual Choice® ant bait station; PT brand Cy-Kick® CS residual insecticide for perimeter spraying; PT brand Tri-Die® and Perma-Dust® for void treatments; and PT brand pressurized residuals for crack and crevice® treatment.

Best for foraging

Although PT brand 388B Advance ant gel bait can eliminate a colony, it's best for eliminating foragers visible to customers. PT brand 388B ant gel bait is a valuable control tool both indoors and outdoors and can be used in and around food handling facilities, schools, commercial and residential buildings, and hospitals.

Types of ants

Most ants which have an affinity for sugar-based food consume PT brand 388B ant gel bait including Argentine, odorous house, carpenter, crazy and ghost ants making this an excellent bait for control. Other ants that readily consume PT brand 388B Advance ant gel bait are acrobat, allegheny, bigheaded, cornfield, harvester, little black, pavement, pharaoh, pyramid, whitefooted, thief and honey.
